

SOLVING YOUR MOST COMPLEX PROBLEMS

We are here to help you during every phase of your project.

Our Engineering team consists of Plastic Engineers, Mechanical Engineers, Electrical Engineers and Biomedical Engineers, all working together to solve your most complex problems.

We also provide design modifications and enhancements, tooling design, manufacturing automations, quality assurance, assembly and packaging assistance. We evaluate the entire process to determine where steps can be combined or even eliminated through lean cell manufacturing or advanced processing. This helps keep costs low, a mission as critical to us as it is to you.

Partnering with the right manufacturer from the start will save you both time and money as your product goes from conception to full production.

- Risk Management – DFMEA & PFMEA
- Full Validation Services
- Process Flow Analysis
- Statistical Analysis
